

Thank you for your purchase of the Fog-Stop.com foil. The Fog-Stop.com foil is the leading anti-fog foil in paintball sports and may also be used on other products like helmets or mirrors in your bathroom, wherever fogging blocks your view.

The Fog-Stop.com foil acts like a sponge; it absorbs the humidity and stays clear and transparent at the same time. This is the essential difference in comparison to lenses without protection and lenses with an „anti-fogging coating“; these glasses will steam up while the Fog-Stop.com protected lens will stay clear and transparent and let you enjoy a clear view.

The Fog-Stop.com foil consists of three layers:

- a) **Protective foil**, Protection will be given during the fixing of the Fog-Stop.com foil, it will be removed at step 8 (version1: green, version2: clear)
- b) **Fog-Stop.com foil**, the anti-fogging solution will be applied to the inside of the lens.
- c) **Transferring foil** on the sticky side. Will be removed at step 4 (version1: clear, version2: clear with a cropped top right corner)

## Application

The Fog-Stop.com foil is available in three sizes:

- a) 40 x 200mm „narrow“
- b) 80 x 200mm „wide“
- c) 210 x 295mm „A4“

The foil can be fully applied to 2D curved lenses (one-way bent lens). On 3D curved lenses (two-way bent lens) only the narrow 40 x 200mm stripes can be applied permanently and without any bubbles. However, on these lenses multiple stripes can be applied.

Because of the diversity of lenses available on the market, the Fog-Stop.com foil is provided in „plus size“ so it can be adapted to the individual lens.

## Fitting

- 1) Arranging & checking the position

Place your Fog-Stop.com foil on your lens and control the final fit. Mark your desired shape on the foil using a soft marker and cut the foil.

- 2) Remove your lens from the goggle

Pay attention on your manufacturer's manual please.

- 3) Prepare the inside of your lens

This is an **important** step. Even if your lens looks clean, all dirt, fingerprints and grease residues have to be completely removed. Please proceed referring to your manufacturer's instruction. In general, microfiber cloths and soft cleaners work well.

- 4) Take the clear transferring foil off the sticky side of the Fog-Stop.com foil.

- 5) Hold the Fog-Stop.com at the edges and apply it to the center of the inside of your lens.

- 6) Place the Fog-Stop.com foil all over your lens and while controlling its fitting.

- 7) Apply light pressure to fix the Fog-Stop.com foil to the lens. Work from the center to the outside, will pushing out any bubbles that might appear.

- 8) Take the protective foil off the Fog-Stop.com foils outside.

- 9) Your lens is ready for use.

Insert your lens with Fog-Stop.com protection into your mask.

Pay attention on your manufacturer's manual please.

## Care

The Fog-Stop.com foil can be cleaned, please use a microfiber cloth and soft cleaners. Any damage to the foil (like scratches or any similar detriment) will not impair the Fog-Stop.com foil's function at all.
